

YOSEMITE, COMPOSTS!

You Can Join the Residential Food Waste Diversion

You have the power to reduce up to **40%** of your waste **every year** with almost no extra effort.

How?

By composting your food waste, you can divert up to **700 pounds** of your trash from the landfill.

We want to make composting your food waste as easy for you as possible. That's why we're expanding our composting program within Yosemite! Enrollment was so popular first go-around, we're offering even more composting opportunities to residents.

Mariposa County Solid Waste & Recycling has new compost equipment, and they **need your food waste.**

Here's how easy it is to make an impact:

- **Simply separate your food waste into a separate bin**
- **Empty your full bin into one of our conveniently located organic food waste dumpsters**
- **And let us handle the rest**

We'll even provide you with your personal stainless-steel collection bin for **FREE**

684.4 tons of organic waste is sent to Mariposa landfill **each year.** With your help, we can divert a significant amount of this waste to be used for farming, gardening, and more.

Ready to start composting?

Enroll below to get started and receive your free collection bin

(Note: you must enroll to access the dumpsters).
